waste collection in metropolitan area

SERVIZI AMBIENTALI AREA FIORENTINA

We are working in Florence, Sesto Fiorentino, Campi Bisenzio, Calenzano, Signa, Bagno a Ripoli, Scandicci, Fiesole, Greve in Chianti, San Casciano VP, Tavarnelle VP, Impruneta and Greve.

A served area of about 922 sq km

675.000 inhabitants

325,500 household and 45.000 non-domestic users

A waste production of 410,000 tons per year

waste collection in metropolitan area: vehicles and equipment

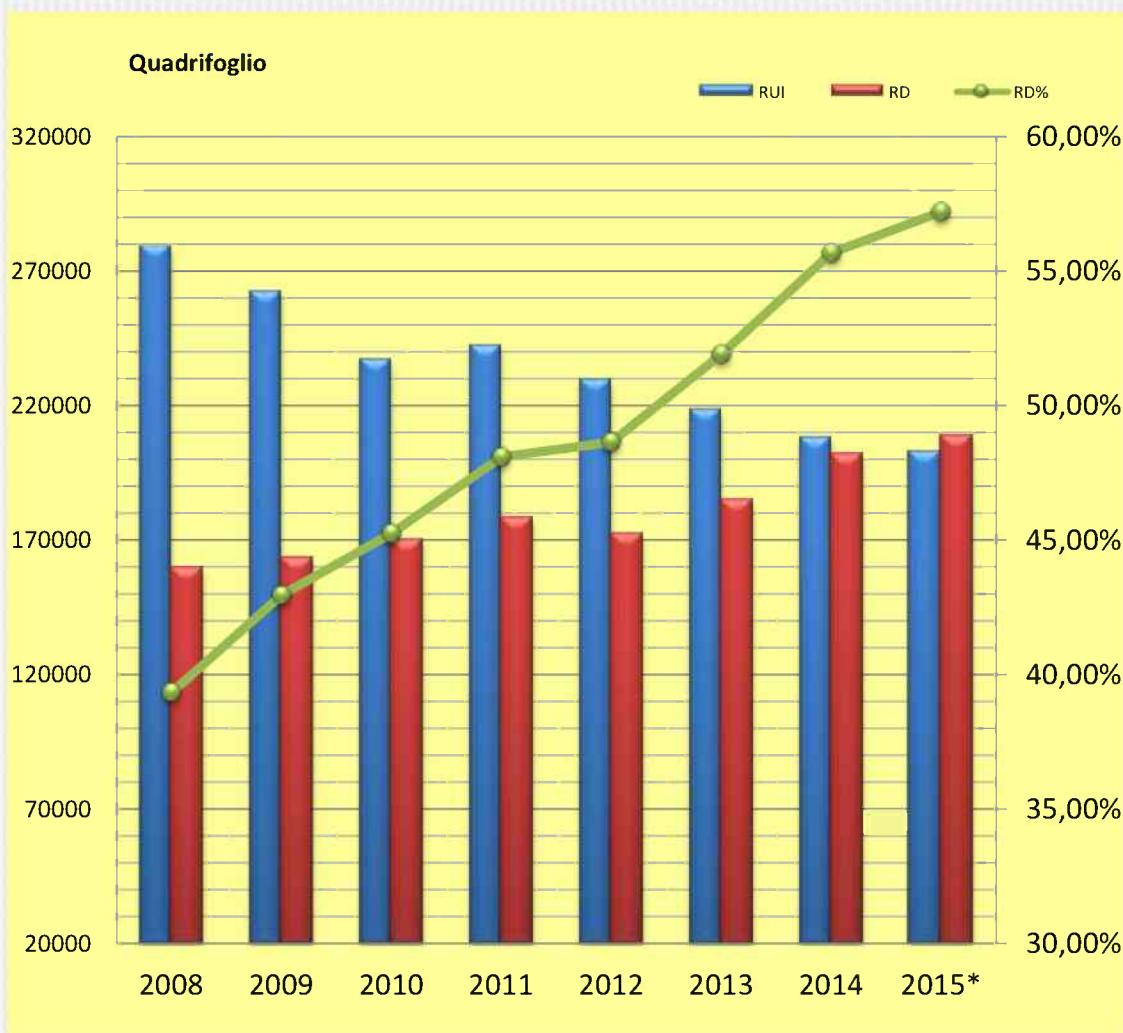

SERVIZI AMBIENTALI AREA FIORENTINA

We use directly *413 vehicles*, other *211* by our contractors

There are more than *41,000 bins* for around *5,000,000 litres of capacity*

The technical solution for collection in Florence Center: Underground bins

In the historical center of Florence, the high concentration of economic activities, the small size of the roads and the high number of tourists most of the year, don't allow to place an appropriate number of road bins for the different waste fractions.

The integrated model of recycling for the city of Florence provides the different solutions

Underground stations for domestic and non domestic users

The technical solution for collection in Florence Center: Underground bins

some underground stations built in the historic center of Florence

solutions for urbanized area: the “Up-Loader” System and access control

Use of electronic access control for unsorted waste

The access control system is a deterrent for users to throw unsorted waste. It consists of a metal cap installed on the cover bin (in the case of locked bins Side Loader) intended for unsorted waste. The volume of the shell is predetermined (usually of c.ca 20 liters). The opening of the cap occurs through the use of a **personal electronic key**, previously delivered to the users. The key allows the opening of the device and the conferring of unsorted waste. The contribution of other components of separate waste, destined for recycling, is rather free in other bins installed in the “ecologic station”.

solutions for small towns and hilly areas

local little bins collection

collection system involves placing little wheeled bins close to small towns and isolated hilly areas all dedicated to separate waste fractions:

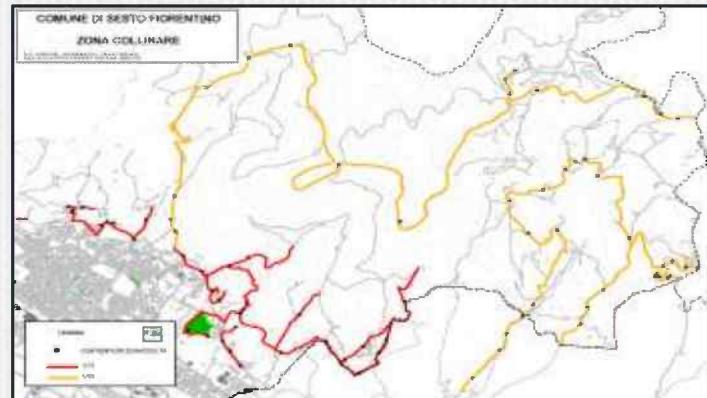

paper

organic

Multimaterial (glass, plastic, metal cans, tetrapak)

Unsorted waste (UnW)

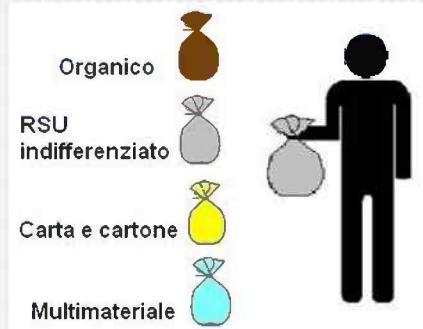

Collection is made by light compactor vehicles conducted by a driver and one operator

solutions for center of town with narrow streets

Collection door to door

Door to door collection is made by leaving waste in front of homes in a specific time slot, according to a weekly schedule prepared at the start of the service

Raccolta porta a porta

Il materiale deve essere esposto sulle soglie del proprio numero civico tra le ore 7,00 e le ore 8,30.
La raccolta sarà effettuata a partire dalle ore 8,30.
Il servizio è attivo nei giorni feriali e festivi intersettimanali escluso il 1 gennaio, 1 maggio, 15 agosto, 25 dicembre e la Domenica.

Gli utenti residenti nelle strade private e nelle carti devono depositare i sacchetti sulla strada principale più vicina.

NON mettere i rifiuti in strada fuori orario di raccolta.
NON usare sacchetti di altri tipi, ma solo quelli forniti
NON abbandonare i rifiuti ingombranti!

Chiama il numero 055 3906655

solutions for industrial areas

Collection “door to door” in industrial areas

The service provides for the collection of waste, similar to urban, through the placement of several bins in the areas of relevance of every industrial user.

Collection is done according to a given schedule which provides weekly collections for packaging, organic waste and the unsorted waste similar to domestic production.

**SERVIZIO
PORTA A PORTA
OSMANNORO**

I rifiuti vanno esposti dalle ore 7.00 alle ore 08.30 sulla soglia del proprio numero civico secondo il calendario seguente:

LUNEDÌ	ORGANICO	TRACCIANTI - FILM PLASTICI
MARTEDÌ	CARTA	ORGANICO
MERCOLEDÌ	MULTIMATERIALE	ORGANICO
GIOVEDÌ	RESIDUO	CARTA
VENERDÌ	ORGANICO	ORGANICO
SABATO	ORGANICO	ORGANICO

La raccolta porta a porta NON SARÀ EFFETTUATA nei giorni: 1 gennaio, 1 maggio, 15 agosto, 25 dicembre.

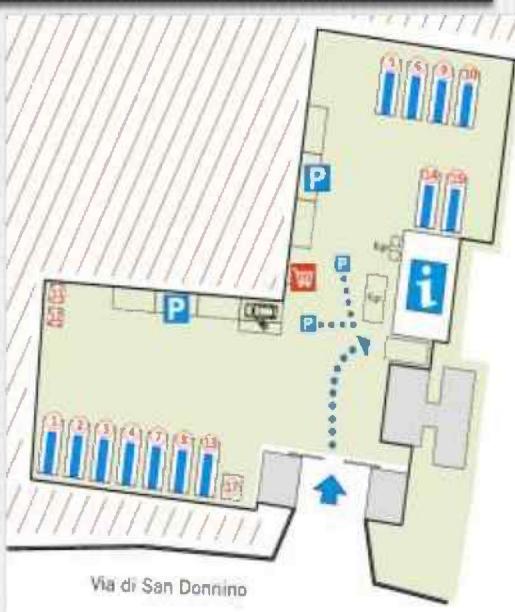

Through this system it is possible to eliminate the road bins, thus avoiding the trap of “special waste” or improper dropouts from different areas.

The “eco-stations”

7 Eco-stations/ Collection centers

- Calenzano via del Pratignone
- Firenze via San Donnino
- Scandicci via Charta 77
- San Casciano V.P. Via Cassia
- Tavarnelle V.P. Via Michelangelo
- Sesto Fiorentino Querciola
- Bagno a Ripoli Campigliano

The “Eco-stations” and “Collection Centers” allow to increase recycling, by conferring directly from users, all type or size of separate waste that are not compatible with the road waste collection. In this year serviced more than 60,000 users

Distributed Services

“Eco-stage”, “Eco Van” and “Micro - collection”

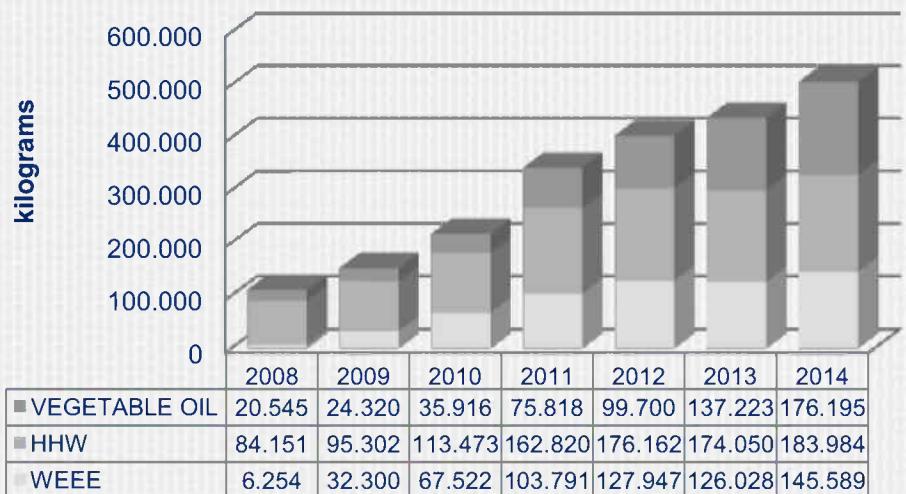

Eco-stage is located in a private place for public use, with an agreement with the owner. The location is equipped with appropriate and adequate bins for the conferral by domestic users of specific types of waste that are not assignable to the normal collection system (Municipal Regulation).

Eco-van is an equipped vehicle to give a moving collection point to the place where citizens usually go; it stations at weekly local markets, according to specific time slots and calendar.

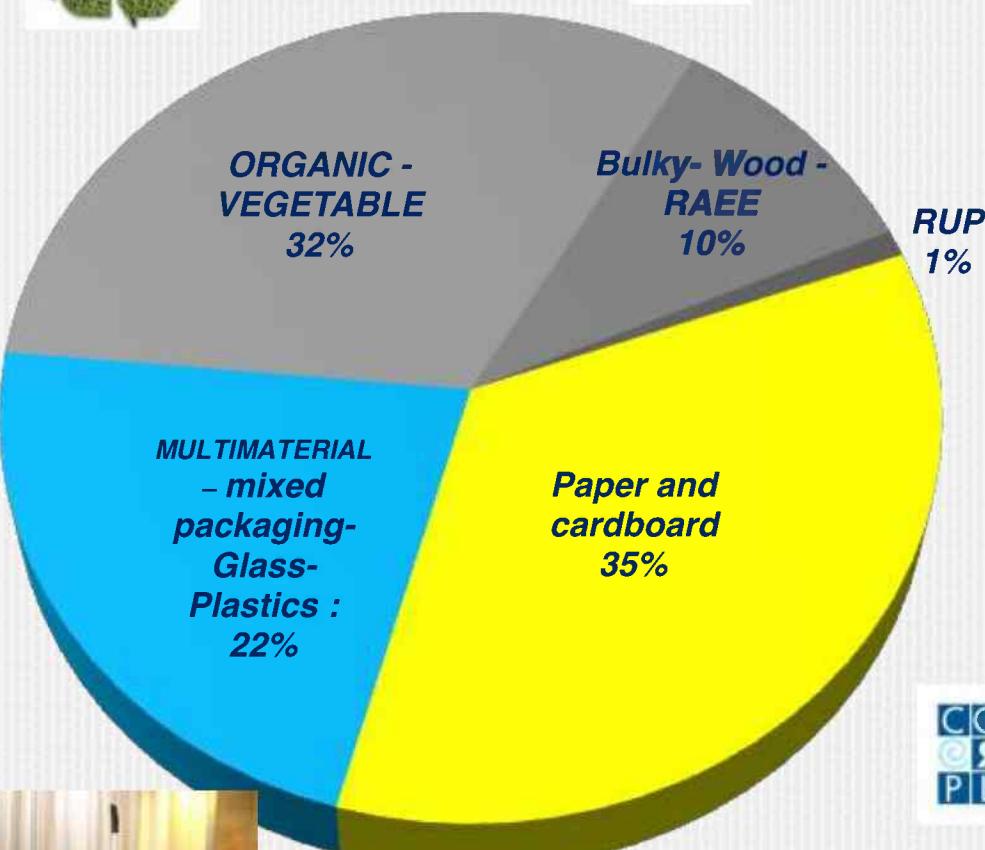

Since 2008 the network “Eco-stage – Eco-van has been developed, up to now, in the presence of:

- 48 “Eco-stage” installed;
- 33 local markets served by Eco-van”;
- 1,111 individual collection points for batteries, expired drugs, small electric and electronic appliances (WEEE).
